Who is **DESLEEMATTEX**, and why this is important to you?

DesleeMattex (previously known as Mattex) was established in 1962. In March 2010, DesleeMattex signed a Joint Venture Agreement with Deslee Clama, an international mattress fashion specialist.

Deslee Clama is a textile company based in Belgium, with factories in Romania, the United States, Indonesia, Brazil with sales offices in Spain, Singapore and India.

This partnership enables DesleeMattex to offer Africa locally produced and world class, mattress fabric with technology that offers the end-consumer the ultimate sleeping solution.

During the year of 2016, Deslee Clama merged with Bekaert Textiles which is one of the biggest mattress fabric suppliers in the world, also based in Belgium.

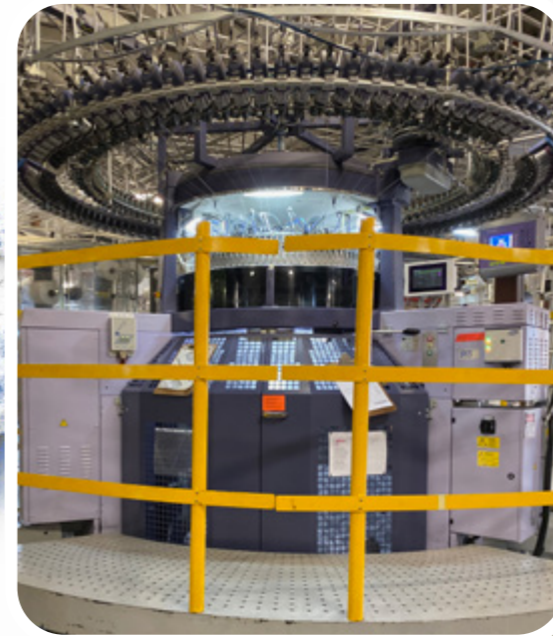

Now, DesleeMattex is part of an even bigger, more experienced and knowledgeable group called Bekaert Deslee, with 19 factories around the world.

Your business is **one step ahead** with **DESLEEMATTEX**

DesleeMattex has state-of-the-art air jet looms and circular knitting equipment, with an extrusion plant and finishing line.

DesleeMattex has a strong focus on lean manufacturing principles and centre their attention on customer satisfaction.

“ On-trend mattress fashion for the consumer who is increasingly aware that quality time in bed is important. ”

FRESCHÉ® COMBINES EFFICIENCY, ECOLOGY AND ECONOMY

Fresche® is a state-of-the-art mattress finishing that successfully fights bacteria and house dust mites. This new microbial solution is not only extremely efficient, it is also completely safe for you and the environment.

A HARMLESS WAY TO COMBAT MICROBES

Fresche® uses environmentally friendly, molecular technology to reduce microbes in your mattress. Most textile biocides combat bacteria by a complex process of chemical interaction. This often does not work efficiently and allows harmful microbes to build resistance against the chemicals. Fresche®, on the contrary, uses a 'mechanical process' that contains no heavy metals, chemical toxicants or flammable chemical agents.

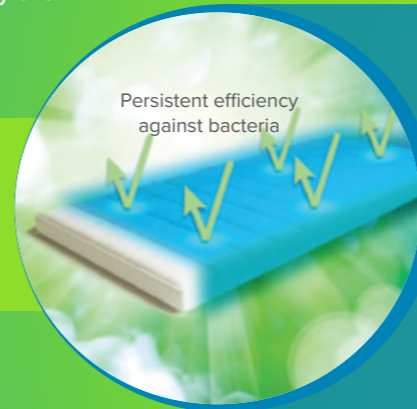

FRESCHÉ® GIVES YOU TRUE VALUE FOR MONEY

Fresche® gives mattress producers a competitive advantage in the market. Not only because of the efficiency of the active ingredient of Fresche®, but also due to long-lasting antimicrobial performance.

SAFE FOR PEOPLE, PETS & PLANET

Fresche® uses natural molecular 'spikes' that hold positively charged ions. These ions attract the pathogens and neutralize them through a process known as lysis. The microscopic spikes are invisible to the human eye and they are neither toxic nor allergenic. They are completely safe and environmentally friendly antimicrobials.

The next generation of microbial solutions

**TESTED... AND APPROVED!**

Fresche® has been effectively tested against superbugs such as MRSA & E-Coli, but it also proved efficient against bacteria causing hospital-acquired diseases. Fresche® is approved by the US Environmental Protection Agency and complies with the requirements of the European Biocidal Product Register.

The active ingredient of Fresche® is registered with the US EPA, and is compliant with the treated article exemption code. Fresche is also compliant and registered with Oeko-Tex as being safe. No wonder Fresche® is frequently used in the healthcare sector.
