BiO COTTON

The demand for pure and honest materials is growing like never before. This is why Deslee Mattex has introduced organically cultivated cotton as a raw material into its extensive range of mattress fabrics.

This mattress fabric is called BiO Cotton because it is made from 100% organically grown cotton fibre.

THE BENEFITS OF BiO COTTON IN MATTRESS FABRIC

The organic cultivation methods by no means detract from the natural qualities of cotton. This cotton is just as soft, strong and voluminous.

SOCIAL RESPONSIBILITY

The increasingly knowledgeable consumer is insisting on a more consistent approach to social responsibility and environmental management. BiO Cotton is very much in demand for the production of mattress fabrics, household linen and clothing.

It is such a comfort
knowing you will not be
sleeping on pesticides.
